Rankings

Curated views into Singapore's AI occupation landscape. Each list slices the data differently to surface distinct insights.

These rankings emerge from a three-layer structural score — a multi-source exposure layer, human bottleneck strength, and Singapore market signals — applied to 562 official occupations. Each list tells a different story about how AI is reshaping work.

Reports

Latest published context as of 2026-03-20: the latest official labour release is MOM Labour Market Report Q4 2025, and the current site monitor now uses Q4 2025 full. The latest macro snapshot is 2025 4Q unemployment, and the latest official national AI-adoption survey is IMDA's 2024 data. Taken together, they show a labour market that remains fairly tight (2.9% resident unemployment) while AI usage is already mainstream (74% of workers reported using AI at work).

The live labour monitor now uses the full MOM Labour Market Report Q4 2025, including explicit Q3-to-Q4 deltas for vacancy, hiring, retrenchment and re-entry signals.
